# Diving Into Javascript

Intro to Javascript

- JavaScript is a high-level, interpreted programming language primarily used for adding interactivity and dynamic behavior to web pages.

- It is one of the core technology of the World Wide Web alongside HTML and CSS.

- It is used to create client-side scripts that interact with the user, control the browser, and modify the content displayed on a webpage.

What Else We Can Do with **JavaScript** ?

1. Front-end Web Development

2. Back-end Web Development

3. Mobile App Development

4. GameDevelopment

5. Serverless Computing

6. Back-end Web Development

7. Desktop Applications

In summary, JavaScript is a powerful and versatile programming language that empowers developers to create applications across various domains of software development.
